

Terrific Time Grade 22 220m *****

Terrific Time 21 *****

Snort starting off on the first pitch of Terrific Time. Photo Brent Russel

Pitch 1: 25m 21. Climb up the easy ramp. Crank onto the grey face and then head up the seam on the orange-red face to a thin rail below the overhang. Crank through to juggy rail then crank strenuously out right on grey jugs to attain a balancy face. Move up and left to a ledge.

Pitch 2: 45m 17. Continue up the faces and flakes heading onto the arête on perfect rock to a ledge below the large overhangs. (Stance shared with **"Lekker Time"**).

Pitch 3: 20m 20. Head up past the fixed cam to the roof rail with lay-backs and or hand jams. Rail right to the lip and continue up the face to the left of **Fun Time's** crack. Belay on top of the large gendarme on the left. (Small cairn).

Pitch 4: 40m 16. Step across the gap and move left and follow corners and cracks upwards to belay on a ledge below and slightly down from a distinctive square orange rock scar.

Pitch 5: 25m 16. Climb past the rock scar 2-3m to the right and continue on excellent rock and good holds to stance on a large ledge shared with **Lekker Time**.

Pitch 6: 50m 20. Climb up the mottled black the recess on dodgy looking flakes but excellent pro just left of **Lekker Time**. Once the angle eases step left 3m and climb the grey panels of rock parallel to **Lekker Time**.

Pitch 7: 20m 19. Pull up onto the slab and head towards a slot in the overlap, just to the left of **Lekker Time's** crux. Pull up into the slot (great gear) and head up to the roof to the stance.

Pitch 8: 20m 17. Traverse right across the grey face and break through the small roof then head up to the ledge.

Pitch 7 and 8 can be combined if you are sure your second will get the crank through the overlap. But on a hot day it is nice to belay in the shade under the overhang.

An alternative to pitch 8 is to crank straight through the roof on severely cramped up move using under-clings, jams and so on. Been looked at but not yet climbed. Will be at least grade 24.

Descent: Walk along the ledge system in a south-westerly direction for about 100m to the **Timerity Abseil**.
